DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 7 September 2005 have been fully considered but they are not persuasive. Applicant argues, page 11, that Pastor does not disclose estimating speech together with some noise rather estimation of the spectral density of the signal contains speech together with all noise. This is not persuasive as the term "some" is broad and defined by Merriam-Webster's Collegiate Dictionary, Tenth Edition as "being of an unspecified amount or number".

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1, 3-12, 14, 16-26, 28-36, and 38-45 are rejected under 35 U.S.C. 102(e) as being anticipated by Pastor et al. (Hereinafter "Pastor") (US Patent 6,445,801).

Regarding Claims 1, 24, and 36 Pastor discloses a noise suppressor, communications terminal, and method of suppressing noise in a signal containing noise to provide a noise suppressed signal in which an estimate is made of the noise (Fig. 1, reference 2) and an estimate is made of speech together with some noise (reference 3), wherein the estimate of speech together with some noise is used to generate a noise reducing filter (Fig. 1, filter 4.

Regarding Claims 3, 16, 28, and 38 Pastor further discloses the level of the noise included in the estimate of the speech together with some noise is variable so as to include a desired amount of noise in the noise suppressed signal (Col. 7, lines 38-45 disclose variable coefficient alpha).

Regarding Claim 4, 17, 29, and 39 Pastor further discloses noise suppression in signals containing speech (i.e. context information) (Col. 1, lines 10-13).

Regarding Claims, 5, 18, 30, and 40 Pastor further discloses the level of the noise is below the mask limit of the speech and so is not audible to a listener (Col. 2, lines 49-56).

Regarding Claims 6, 19, 31, and 41 Pastor further discloses the level of noise in the estimate of the speech together with some noise approaches the mask limit of the speech and so some noise context information is left in the signal (Col. 12, lines 57-67).

Regarding Claims 10, 20, 32, and 42, Pastor further discloses the estimate of

speech together with some noise is estimated to have a noise level lower than the noise

level in the signal containing noise (Col. 9, line 65 through Col. 10, line 14).

Regarding Claims 12, 22, 34, and 44, Pastor further discloses noise reducing

filters generalized and being a Wiener filter (Col. 6, lines 17-28).

Regarding Claims 11, 21, 33, and 43, Pastor further discloses a reducing factor is applied to reduce the noise level of the estimate of speech together with some noise

(Fig. 2, reference 4) relative to the noise level in the signal containing noise (references

2 and 3).

Regarding Claim 8, Pastor further discloses the estimated noise is power

spectral density (see abstract).

Regarding Claim 9, Pastor further discloses the first estimation (Fig. 2, reference

2) is used to update the estimated noise (reference 4).

Regarding Claim 7, 13, 23, 35, and 45 Pastor further discloses a gain coefficient

is produced in which a first estimation of the gain coefficient is made adaptively (Col. 2,

lines 42-46) and this first estimation is used to produce a noise estimation which is then

used to produce a second estimation of the gain function (Fig. 2, reference 4).

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2644

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin Michalski whose telephone number is (571)272-7524. The examiner can normally be reached on M-F 7-3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivian Chin can be reached on (571)272-7848. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
